### **DETAILED ACTION**

1. Applicant's election of Group I with traverse is acknowledged.
2. It appears "the sealing body is" should be deleted from claim 16.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-3, 5, 8-12, and 14-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Roux (1,235,926).

Roux discloses a sealing device and a method of sealing using a device (see Fig. 4) comprising a conducting element 8 that can be inserted off-center in a hole 7 of a housing wall 1 (or 24) (in that the dimensions of the hole and the O.D. of the element 8 permit radial play). The device has a sealing body 25/20 forming an axial seal (at contact with 8) and a radial seal (against surface of 4). Or, the radial seal can be formed along the threads of 24. The element 8 has a recess (adjacent the flange) to receive the sealing body. As seen in the Figure, there is clearance to allow radial movement of the body within the recess. A sealing ring 19 with an internal thread fixes the body. The inner diameter of body 25 is considered an end stop.

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
